

Partnership Opportunities

Micro and Nanotechnology in Medicine (MNM) conference is a special topic conference of the IEEE Engineering in Medicine & Biology Society (EMBS). This conference focuses on the development and application of micro- and nanoscale technologies to problems in the life sciences that include, but are not limited to, a) clinical and point-of-care diagnostic devices, b) organ-on-a-chip systems for testing the toxicity of pharmaceuticals and industrial chemicals, c) wearable biosensors for mobile healthcare, d) high-throughput systems for novel drug discovery for global diseases, e) nanophotonics, and f) nanomaterials for imaging and treating disease.

Furthermore, the conference also features case studies of how key technologies above have been translated to the clinic and/or marketplace for widespread dissemination. In addition to showcasing leading research in the above areas by global leaders, the MNM conference also fosters robust interactions between scientists, engineers, entrepreneurs and medical researchers in a dedicated and close-knit forum. Platinum (\$10,000+)

- Full-page ad in digital program and Full-page handout distributed @ conference.
- Two complimentary conference registrations
- One tabletop display
- Logo on the Website

Gold (\$5,000)

- Half page ad in digital program
- One complimentary conference registration
- One tabletop display
- Logo on the Website

Silver (\$3,000)

- One complimentary conference registration
- One tabletop display
- Logo on the Website

Speaker Support (\$2,000+)

- Cover Speaker fees, travel support, etc
- Logo on the Website

Student Support (\$1,000+)

- Cover best paper awards, student travel, young investigator awards
- Logo on the Website

Registration Giveaways (priced upon request)

- Inquire Within
- Logo on the Website

Contributors (\$500)

- Logo on the Website
